CoverLawn®

A patented hybrid turf solution for football

ÅhusTurf Hybrid Turf Football & Rugby

- CoverLawn® reinforce the grass and protect the grass crown and the roots of the plant.
- With CoverLawn® you receive a very strong wear resistance grass surface.
- The grass is growing freely up and down through CoverLawn® and together they form a very strong grass surface.
- The knitted design prevents plastic piles from spreading into the nature.
- The strength of CoverLawn® prevents compaction in the ground.
- Muddy areas remains green all year around.
- Increase your usage 3-5 times.
- Keeps moisture, temperature and full drainage.
- No studs will get stuck in CoverLawn® for football.
<https://www.youtube.com/watch?v=TECnXNwVKMA> where you see the mat laying loose on the ground.

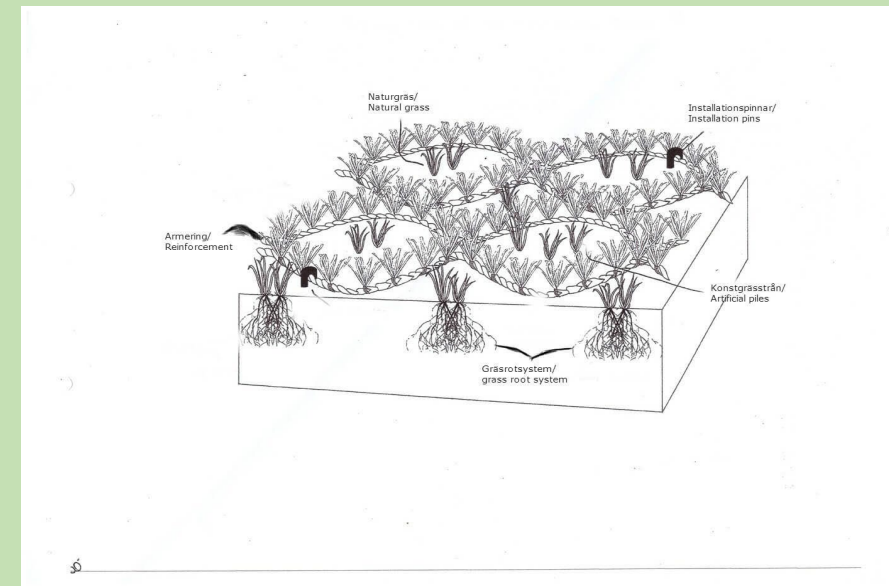

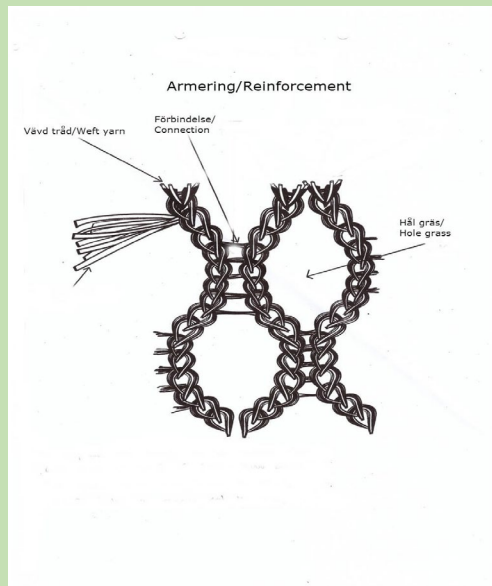

- **Installation**
- Installation on existing grass or on seedbed.
- Requires no particular soil composition. Same as you use for football today.
- ÅhusTurf will of course supply you with installation instructions. Both ground preparation and installation instructions.

Maintenance

- Initial mowing with manual mower until integration is complete.
- Thatch is removed by brushing off the organic material on the hybrid. You can use an active brush in front of the tractor.
- Aeration is done with solid tines 8-12 mm.
- When you have aerated you fill the holes with a mix of sand and seed.
- No top dress is needed on top of the Hybrid.
- If you want to use the pitch directly after installation please call us and we will tell you how to do.

Renovation

- Brush off and remove organic material.
- Aerate with solid tines.
- Fill the holes with a mix of sand and seed.
- Fertilise

After 6 weeks
